benoit@gooris.com

I am **full stack developer** that loves to create **web applications** since more than 20 years. I provide **professional work** with simplicity, efficiency and elegance in mind.

From **design** to production, I am specialized in **agile** web software development, communication strategy, and I have a strong experience in **supporting startups**.

I take as much care with the accessibility, **usability** and look and feel of your interface as I do when ensuring your application will **scale** and is **secure**.

Technical skills

Daily: CFML - Coldfusion/Lucee - cfwheels

Strong: Coldfusion/CfWheels, Ruby/Rails, Groovy/Grails, SpringBoot, Angular, VueJs, Rest API, CSS3, MySql, Postgres, Git, Agile, Kanban

Knowledgeable: Flutter, React(-Native), Svelte, Firebase, AWS, Google cloud, Spring

23 Years Working Experiences

April 2019 – present: Software developer > Solution Architect @Unifiedpost

I developed Digitaly.Registered. solution from scratch and maintain the existing UPD flow. The tools offer concrete solutions to transport/accept/sign documents (contract, invoice) from sender to receiver through multiple solutions (itsme, namirial...). I've taken on higher responsibilities (Software Developer > Technical Coordinator > Solution Architect) and delivered significant results that have positively impacted our products/teams performance:

- I ensure the continuity and development of UPD applications by transferring all knowledge to my colleagues as much as I can.
- I manage horizontal/vertical projects by creating strong relationships with all VN teams I have the pleasure to work with (4 teams dev/qa)
- I bring expertise in multiple domains and can talk the language of customers, support teams, product owners, business analysts, QA testers, developers and IT multiverses.

We are using Ruby on Rails / Java environment with React, Git, Postgresql.

Nov 2012 – present: Founder, CTO & full stack developer @Smoall

Smoall is a SaaS application that helps freelancers and little companies in their daily operations (aka mini ERP). Full stack development using Lucee, cfwheels, jquery, MySql... on AWS.

Mar 2018 – February 2019: Full stack developer @PaxFamilia

My mission was to develop within a team an application called PaxFamilia that helps people to manage heritage information. The tool offers concrete solutions to optimize working time and help professionals produce better advice. We used Ruby on Rails environment with Vue.js, Vault, Git, Postgresql.

Jan 2017 – Feb 2018: Full stack developer @Adessa

I developed within a 5 developers team an application called Unbox that helps employee of a company to spend a part of his salary into benefits like more holidays, car upgrade, trainings, home services... We used Java environment with Grails, Angular4, Spring Security, Gradle, Git, MySql, AWS

Sep 2013 – Jun 2016: Web Software Engineer @Swift

I delivered professional services and expertise in order to migrate private/public applications within the Swift.com team. I led and trained a remote back-end & front-end development team on Coldfusion, Java, jQuery, Oracle and SAP webservices.

Jun 2012 – Aug 2013: Full stack developer @Energreen

I analyzed, developed and maintained an in-house ERP that supports all business of the company. Full stack development using Coldfusion, Cfwheels, MySql, Linux, Vmware

Oct 2010 – May 2012: CTO & full stack developer @CoolCoups

CoolCoups was an e-commerce website where the customers had the possibilities to buy incredible deals (Groupon-like). I managed all IT questions from web developments to marketing. I took part in the business model and growth of the company. I developed with CakePHP, MySql and linked to Ingenico for online payments.

Jun 2009 – Jun 2010: Founder & full stack developer @ezLunch

Creation of a startup "ezLunch" in collaboration with Solvay Entrepreneur (2 coaches). Creation of business and financial plan, prepare and execute market studies, analyze and develop secured web site, create all marketing support. Full stack development with Java Struts2, PostgreSQL and linux.

Jan 2008 – Jun 2009: IT Project Manager & Web Developer @ANT Networks

I led the IT team and projects Resto.be, Resto.fr, RestoBookings.be, RestoBookings.fr, Hotels.be...). Full stack developer with Coldfusion, SQLServer

Mar 2004 – Nov 2007: Web Development Leader @Bridgestone Europe

I managed different web projects for a pan European company: all Internet sites, Employee portal, Customer portal, Collaborative application, web applications for internal business, Single Sign-On, Statistics, R&D (new technology), Digital Assets Management, coordinate with all countries, define web standards and specifications. Led offshore team (India) for development. Develop also many applications in Coldfusion, Java, Oracle, Vignette.

Feb 2003 – Dec 2003: Software engineer @Ictinos

Conception, development (ASP, SQL server, Oracle), maintenance and installation of Ictinos applications (Human Resources tools).

Sep 2001 – Dec 2002: Team lead & Technical Manager Centric Ksi Belgium

My function was to analyze and manage the development of reach web applications in Coldfusion, R&D, and pre-sales. I led a team of 6 persons (designer, integrator, developers, students)
